DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: on page 1 at the end of paragraph [0001] "**BACKGROUND OF THE INVENTION**" should be deleted.

Appropriate correction is required.

Claim Objections

Claim 1 is objected to because of the following informalities: in line 8 "channel" should be "channels". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are vague and indefinite because in claim 8, lines 8 and 9, the phrase "forming said wall structure by at least said folded sheet metals by attaching said folded sheet metals to a wall" is confusing. Firstly, there is only a single piece of sheet metal mentioned in the claim, not plural "sheet metals". Secondly, the sheet metal is the material used to create the wall structure of the cooling channels. It is unclear if the applicant is trying to set forth that part of each cooling

Art Unit: 3746

channel is attached to the wall or if only the sheet metal, and not necessarily part of each cooling channel, is connected to the wall.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Stockel (USPN 3,154,914).

Stockel discloses a liquid cooled rocket nozzle having a wall (Fig. 1) made up of curved wall (11) and plural cooling channels (14) each having a flow guiding surface (28, Figs. 4a-d). As can be seen in Figs. 4a-d the flow guide directs the cooling liquid at the radially outer part of the channel radially inwards as the fluid flows along the cooling channel.

Allowable Subject Matter

Claims 2-4, 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 8-10 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wagner and Lundgren disclose rocket nozzle wall structures having plural cooling channels. Bichler et al disclose a cooling channel with ridges or protrusions and Hemmerich et al discloses a heat exchanger with flow guiding structures.
